

StoDesign offers several services to support your projects in the local markets.

Good design is not only able to create a positive atmosphere for our built environment, but can also establish a higher economic value of architecture!

## Design concepts

see more

The architects design idea gives a guideline for our work.

Whether it is a detached construction project or a comprehensive development of new living space, StoDesign can offer an additional point of view focusing on colour, surface and human perception.

As a consultant on international markets we like to discuss architectural design with all relevant trades like architects, housing industry, investors or craftsmen.

Sto technicians and laboratories are providing the technical know-how to convert an aesthetic vision into reality.

If you are looking for the extraordinary surface, to emphasise your building or maybe a special part of it - StoDesign can help.

Connecting functionality and aesthetics is our mission.

## Colour visualisation

In order to inspire clients with our ideas we need to present schemes in a convincing quality.

Neither the computer monitor nor the hardcopy will show an image according to reality, if there is no foundation of professional colour management.

StoDesign strives to achieve the best possible result for you.

## Seminars and talks

To take some time for thinking about colour theory or surface design will reload our 'batteries' for creativity in our daily work.

StoDesign is able to communicate design aspects of an international team of designers.

An additional benefit of the seminars is it to meet other people, who are working at the same profession. Discussion about design and architecture will always make up the background for our work.

So the benefit of seminars, talks or workshops is always on both sides - for the audience as well as for the instructor.

StoDesign

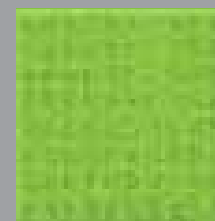

It would be a pleasure for us to collaborate on **your projects!**

Please send elevation drawings, floor- or site plans, photographs and any relevant project information as well as requests for seminars to:
